The End of AIDS: Implications for Care and Treatment of an Aging Population

Antiretroviral therapy (ART) has transformed HIV disease into a chronic, albeit serious, illness. Most with HIV can now live a near-normal life span and AIDS-related complications are rare. *The end of AIDS is in sight, but caring for an aging population with HIV will become paramount.* How do we keep those aging with the virus engaged in care and adherent to ART?

New York University Wasserman Center
Presentation Room A
133 East 13th Street, Suite 2
New York, NY 10003
